

DP Biology Summer Assignment, Class of 2022

You will begin work on your biology internal assessment shortly after school begins in August. By late September you need to have a viable research question and methodology approved so that you can trial your methodology, modify it as needed, and then be ready for data collection in October.

Ponder topics from the syllabus that you have been most interested in AND that lend themselves to experimentation. Look at the “IA Ideas” material (new), as well as the IA rubric and Lab Report Guide (previously posted).

Then, do some research on your topics of interest. Keep track of your sources! Complete the google form “Internal Assessment Proposals Class of 2020” three times, for three distinct topics. Read the form before beginning research. It takes some time to complete.
